NORCOMP

PAVING NEW ROADS FOR ALWAYS-UP COMMUNICATIONS

BEHIND THE WHEEL WITH A LEADER IN CONSTRUCTION TECH—AND WHY THEY TRUST NORCOMP TO HELP GET DELIVERIES FROM POINT A TO POINT B.

TELEMATICS

Custom M8 and M12 pre-wired and panel mount connectors

THE TELEMATICS INDUSTRY IS DRIVING FULL SPEED AHEAD

PREPARE YOUR FLEET WITH HEAVY-DUTY CABLE ASSEMBLIES THAT KEEP COMMUNICATIONS CLEAR THROUGH ANY CONDITIONS.

Equipment aboard heavy-duty haulers is exposed to vibration, moisture, dust, and temperature extremes. Reliable communications drive this construction technology business—they can't let the elements impede operations. A high-performance, ruggedized connector means cement haulers and asphalt pavers get critical construction materials to worksites on-time, every time.

JUST LIKE THIS CONSTRUCTION TECH LEADER, YOU NEED CABLE ASSEMBLIES TOUGH ENOUGH FOR DIRTY JOBS

For this tech provider, communication drops mean long wait times, traffic jams at the worksite, and slow deliveries. Grit and grime can't interrupt real-time connections to haulers transporting essential materials. See why this industry leader trusts NorComp to keep their communications flowing smoothly.

REBOOTING A DISCONTINUED CUSTOM PRODUCT

This client approached NorComp with a custom panel mount assembly. The problem? It was discontinued by their current supplier.

NorComp needed to source a variety of components—some from competing manufacturers. This included working alongside our competitors to ensure our M8 and M12 connectors played well with the precise housing requirements of the products this client needed to connect with.

When we say collaboration is key to project success, we don't just mean with our customers. Our team finds the missing puzzle piece by any means necessary, in this case, by gladly collaborating with our competitors to fulfill the wire-to-board connectors the project demanded.

STREAMLINED EQUIPMENT CONNECTIONS WITH A PRE-WIRED PIGTAIL DESIGN

Pre-wired pigtails were a convenient and efficient choice for this client. Prewired pigtails save time by eliminating the need to strip, crimp, or solder wires to connect with other equipment. They also reduce the risk of installation errors, doubling down on a reliable and consistent connection. Using this design, the client received a fully packaged product ready to hit the road.

4

TOUGH ENOUGH TO HIT THE OPEN ROAD

Every telematics innovator knows their success lies in hiccup-free access to real-time data. Always-up communications mean operators can space out deliveries, zoom into hotspots, and make on-the-fly scheduling changes. Our M8 and M12 panel mount assemblies arm communication lines against the challenging conditions that pummel construction vehicles. Rain, crud, nor endless jostling will disrupt visibility into this team's operations.
